REASONS FOR ALLOWANCE

Remark

- This Office Action is in response to applicant's amendment filed on November 13, 2008, which has been entered into the file.
- By this amendment, the applicant has amended claims 47-50, 53-55, 57, 59-61, 63-64, has canceled claims 62, 65-78 and has newly added claims 79-93.
- Claims 47-61, 63-64 and 79-93 remain pending in this application.

Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance: of the prior art references considered, none has disclose *an optical logic circuit performing an inverse function for optical signals generated by a first and second semiconductor light sources*, wherein the logic circuit is comprised of a *semiconductor substrate, an optical layer overlaying the semiconductor substrate having a second semiconductor material configured to provide a plurality of optical pathways forming the optical logic gate. The optical logic gate having a first and second optical inputs coupled to the first and second semiconductor light sources, an interference region coupled to the first and second optical input and an optical output coupled to the interference region. The interference region comprises the second semiconductor material and is bounded on all sides by a semiconductor material other than the second semiconductor material. The interference region contains no potential barriers partitioning the interference region. The output light signal from the optical logic circuit is a Boolean logic output signal based on the input light signal.*

The cited US patent issued to Yang et al (PN. 5,239,173) teaches an optical logic circuit based on interference of light waves from two coherent light sources. However this reference does not teach explicitly that the optical logic circuit is implemented with the structures recited in the claims of the instant application. While using semiconductor material to implement optical logic gate or circuit is

known in the art, no explicit teachings of the structures and materials specifics are provided to make reasonable motivation to one skilled in the art to modify the optical logic circuit of Yang et al to meet the invention of the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Audrey Y. Chang whose telephone number is 571-272-2309. The examiner can normally be reached on Monday-Friday (9:00-4:30), alternative Mondays off.
